DETAILED ACTION

Response to After Final Amendment

1. Claims 2-5, 7-9 and 12-13 are pending.
2. The rejection of claims 2-5, 7-8 under 35 U.S.C. 103(a) as being unpatentable over Stringer et al. (US 5,858,955) is withdrawn in light of applicant's amendment to the claims and further review of the prior art.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Kevin Mansfield on Monday May 24, 2003.

4. The application has been amended as follows:

The claims:

In claim 8, delete "." and insert --,wherein the composition includes, per 100 parts by weight of water (component D), the following amounts of components A, B, C, E, F: 5 to 35 parts by weight of component A, 10 to 40 parts by weight of component B, 3 to 30 parts by weight of component C, 0 to 30 parts by weight of component E, and 0 to 20 parts by weight of component F.--

Claim 7 is cancelled.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance: Claims 2-5, 8-9 and 12-13, renumbered 1-8, are allowable upon consideration of applicants' arguments and consideration of the prior art. The prior art most pertinent to the instant claims is Stringer et al. (US 5,425,784).

Regarding component A Stringer et al. teach the utility of sodium cumene sulfonate which meets the limitation of formula I. Specifically regarding component B, Stringer et al. teach the utility of primary aliphatic alcohol ethoxylates, and secondary aliphatic alcohol ethoxylates, alkylphenol ethoxylates. See col.5, ln.25-30. Specifically regarding component C, Stringer et al. teach the utility of a C10 -C16 alkanol condensate with ethylene oxide and propylene oxide, the weight ratio of ethylene oxide to propylene oxide being 3:1 and the total alkoxy content being about 75% by weight. See col.6, ln.34-36. Specifically regarding component D, Stringer et al. teach a light duty liquid cleaning composition comprising water. See col.4, ln. 48. Accordingly, Stringer et al. provide a suggestion to incorporate components A-D in a cleaning composition in a process performed on fiber materials to remove impurities.

However Stringer et al. do not teach or suggest the claimed method to pretreat textile wovens or knits prior to manufacture of enduse articles from said textile.

It would not have been obvious to one of ordinary skill in the art, at the time the invention was made to to pretreat textile wovens or knits prior to manufacture of enduse articles from said textile as recited by the instant claims because the prior art suggests a light duty liquid cleaning composition comprising components A-D for use in fabric care.

None of the prior art of record teach or suggest the claimed method of pretreatment prior to manufacture of enduse articles comprising the components recited in instant claim 8, renumbered claim 1, in the specific proportions as recited by the instant claims.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
